

Make a 5-YEAR PLAN 2025 – 2030!

Contribute to our Commonwealth's commitment to reduce carbon emissions 50% by 2030 (from the 1990 levels) with support from an experienced coach, planner, or course to assist you in developing a customized 5-year plan that reflects your unique energy saving options.

***On the track to reach net-zero emissions by 2050,
the steepest emissions reductions are set to occur between 2025 and 2030.***

That's when the most action needs to be happening,

said Katherine Antos, undersecretary of decarbonization and resilience at the Massachusetts Executive Office of Energy and Environmental Affairs.

Support for creating your 5-Year Plan will be provided by The Town of Lincoln's Green Energy subcommittee CFREE (Carbon-Free Residential - Everything Electric).

CFREE will connect you with an experienced Green Energy Coach to help develop your customized 5-Year Plan plan. Contact: lincolngreencoach@gmail.com

If you'd like to get started on your own, here are two excellent pathways:

Rewiring America has a great online [personal electrification planner](#) that quickly walks you through the steps to develop a plan.

Electrify Arlington (MA) has an excellent course about developing a plan to reduce your greenhouse gas emissions (primarily through electrification).

Go to their [website](#) and scroll down to Electrify Arlington Courses, under which you'll find *How to Make a Plan to Electrify Your Home*.

The course has three parts, each of which is available as a video or a slide deck. It's thorough and clear."
